MORNINGSTAR STYLE BOX™

The Morningstar Style Box™ reveals a fund's investment strategy by showing its investment style and market capitalization based on the fund's portfolio holdings.

The Brandes U.S. Value Fund (the "Fund") Class I USD decreased -0.50% during the quarter, outperforming the Russell 1000 Value Index which fell -2.13%.

Positive Contributors

Despite the index's overall decline, the financials sector appreciated in the quarter, and our overweight and stock selection aided relative performance. Our positions in large money centre banks, notably Wells Fargo and Citigroup, benefited from robust earnings results and market anticipation of a slowdown in rate cuts by the Federal Reserve. Additionally, financial technology firm Fiserv lifted returns.

Holdings in industrials also contributed positively to performance, led by electrical equipment company Emerson Electric and machinery firm Gates Industrial.

Other contributors included technology-related holdings Flex and Alphabet, as well as pharmaceutical distributor McKesson. All three companies reported earnings that exceeded consensus estimates, with Alphabet receiving an additional boost from the unveiling of its new quantum computing chip.

Performance Detractors

Health care was one of the worst-performing sectors in the index. Consequently, our overweight hurt relative returns, although our holdings overall held up better than those in the index.

HCA Healthcare, Cigna, Sanofi, and CVS all declined amid market concerns for potential regulatory changes, including one that involves how health insurers recognise profits in their pharmacy benefit manager (PMB) businesses. While we're monitoring the evolving environment, we'd like to note that both Cigna and CVS have already taken actions over the past couple of years to improve transparency and move increasingly toward a more simplified fee-for-service model. In our experience, the market tends to overreact to the uncertainty related to potential health care reform, which often becomes a focal point around elections. This can create appealing investment opportunities. With both Cigna and CVS trading at less than 10x forward earnings, we feel the market concerns have been more than priced in the shares.

Outside health care, detractors included our semiconductor holdings Micron Technology and Qorvo.

Despite its positive earnings results, Qorvo declined after revising its earnings guidance lower, primarily because its smartphone end-market remains cyclically depressed as demand has normalized from its elevated levels during the pandemic. The company also cited a shift in consumer preference—especially in the Chinese market—toward lower-end smartphones as a potential demand headwind for its semiconductors, given that Qorvo focuses more on the higher-end smartphone market. At its current valuation based on below mid-cycle earnings, we believe Qorvo continues to offer an attractive margin of safety (the discount of market price to our estimate of intrinsic value). However, due to the increased risks from the market shift, we have maintained the position at a smaller allocation.

Meanwhile, Micron Technology tumbled on the weakness in the semiconductor market. We trimmed our position in Micron earlier in the year when the market was excited about

memory semiconductors' role in the artificial intelligence (AI) buildout, but we then purchased more shares toward the end of the quarter after the stock declined on smartphone and PC (personal computer) weakness. Micron should remain quite cyclical in the consolidated memory industry, but we feel it is well positioned to improve its share in high-bandwidth memory needed for AI.

Select Activity in the Quarter

We initiated positions in food service company Sysco, and aerospace material company Hexcel.

Founded in 1946, Hexcel (HXL) is a manufacturer of carbon fiber composite materials and composite engineered structures for commercial aerospace, defense, space, and industrial end-markets. HXL's composites are key inputs for a variety of applications, including aerostructures (wings, fuselage, engine casings), primary structures on spacecraft, and carbon ceramic brakes for high-performance cars. About 90% of its revenues comes from aerospace programs (commercial and defense), with HXL active on all modern Airbus and Boeing platforms, as well as over 100 defense programs.

Since the pandemic, HXL has faced industry-wide skilled-labor shortages, supply-chain bottlenecks, and input cost inflation. These challenges have slowed the production ramps on key commercial platforms and compressed HXL's margins as the company operates under fixed-price contracts. Additionally, HXL had increased capacity ahead of these production ramps and thus has been operating at suboptimal efficiency on a substantial fixed-cost base. While these headwinds have started to ease and HXL's fundamentals have moved closer to pre-pandemic levels, lingering supply-chain issues slowed production on commercial aerospace platforms at Airbus and Boeing, prompting questions about the pace of normalisation. The outlook has been further dampened by regulatory hurdles and the Boeing labor strike, though it should be noted that HXL's commercial exposure is primarily to Airbus.

Despite the supply-chain issues starting to alleviate, the market seems to extrapolate HXL's prospects from its short-term challenges, resulting in the decline of its share price. However, we expect the environment to gradually normalise and HXL to resume its recovery to pre-pandemic levels. Among aerospace composite manufacturers, HXL holds a leading market share and is the most vertically integrated player, with strong capabilities throughout the value chain. There is also potential for secular growth from new aircraft designs that will incorporate more carbon fiber content as the industry seeks to reduce emissions. This should bode well for demand for HXL's products in the long term. Furthermore, we appreciate HXL's attractive financial characteristics, including a solid balance sheet, healthy free-

cash-flow generation, and an operating culture focused on return on invested capital metrics. We purchased shares during the quarter as we felt the company's financial characteristics and leadership position were clouded by current headwinds impacting the stock price.

Year-to-Date Briefing

The Fund rose 14.99% in 2024, outperforming its index, the Russell 1000 Value Index, which increased 13.65%.

Value stocks underperformed the overall market (Russell 1000 Value vs. Russell 1000) as the solid performance of large technology companies boosted the broader index. In fact, just three companies (Nvidia, Broadcom, and Meta) drove the majority of the outperformance of the Russell 1000 Index relative to the Russell 1000 Value Index for the year.

For the Fund, outperformance was primarily driven by stock selection across most sectors. Financials was the best-performing sector in the value index, up over 30%. Our overweight and stock selection in the sector benefited relative performance. Leading contributors included Fiserv, Wells Fargo, Bank of New York Mellon, and Citigroup. Other contributors included technology-related holdings such as Flex and Alphabet.

Health care was one of the worst-performing sectors, roughly flat on the year, and our overweight hurt relative performance. At the holding level, notable detractors included Fortrea, CVS, and Merck. Additionally, energy firm Halliburton weighed on returns, as did semiconductor company Qorvo.

Current Positioning

The Fund continues to hold meaningful allocations to the economically sensitive financials sector and the more defensive health care sector, while maintaining underweights in real estate. We also remain underweight in consumer staples and utilities, although the gaps have narrowed as we have identified more value opportunities in these sectors over the past few quarters. Additionally, we have found more opportunities in industrials but we remain modestly underweight. In contrast, we have pared some of our holdings in the health care, financials, and technology sectors, even though they remain areas of overweight for the Fund.

Following the outperformance of growth stocks these past two years, value stocks are now trading near the largest discount relative to growth stocks since the inception of the style indices (Russell 1000 Growth vs. Russell 1000 Value). This valuation disparity is evident across various metrics, such as price/earnings, price/cash flow, and enterprise

value/sales. Historically, such valuation differentials have often signalled attractive future returns for value stocks over longer-term horizons. This is encouraging for us, as the Fund, guided by our value philosophy and process, has had the tendency to outperform the index when value stocks outperformed the Russell 1000 Index.

With only a relatively small number of companies—mostly tech-related—driving the broader market's performance, equity concentration levels have increased materially in popular indices. For example, the eight largest companies contributed the majority of the returns in the Russell 1000 Index this year and now account for over 30% of the index. In our view, this highlights the potential diversification benefits of having a value strategy to complement many investors' increasingly concentrated and technology-centred exposure, as the largest companies in the broader index also represent the largest weights in various factor indices—with the value index being an exception.

Looking ahead, we remain confident that the current fundamentals of our holdings bode well for the long term, and we are excited about the Fund's prospects.

The information contained herein: (1) is proprietary to Morningstar and/or its content providers; (2) may not be copied or distributed; and (3) is not warranted to be accurate, complete, or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results. The Morningstar Rating™ for funds, or “star rating”, is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product’s monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Brandes U.S. Value Fund was rated against the following numbers of U.S. Large-Cap Value Equity funds over the following time periods: 438 funds in the last three years, and 365 funds in the last five years, and 253 funds in the last ten years.

This document is an advertisement for marketing purposes. Before subscribing, please read the prospectus and the key information document for packaged retail and insurance-based investment products (the “PRIIPs KID”) or, for UK investors, the key investor information document (the “UCITS KIID”).

This report is produced by the manager for marketing purposes only and does not constitute an offer or solicitation to subscribe for shares in Brandes Investment Funds plc (the “Company”). For more information on the risks associated with the Fund, please refer to the section entitled Risk Factors in the main body of the prospectus and the Fund’s supplement to the prospectus. Full details regarding the Fund are set out in the key information document for packaged retail and insurance-based investment products (the “PRIIPs KID”) or, for UK investors, the key investor information document (the “UCITS KIID”), the prospectus, the articles of association and the latest financial reports published for the Company (collectively the “Fund Documents”). Before any subscription, it is recommended that you read carefully the Fund Documents. The information provided in this material should not be considered a recommendation to purchase or sell any particular security. Income may fluctuate in accordance with market conditions and taxation arrangements. Investment in the Fund described in this report carries a substantial degree of risk and places your capital at risk. The price and value of investments can go down as well as up. Your investment may be subject to a redemption fee. You may not get back the original amount invested and you may lose all of your investment. Strategies discussed are subject to change at any time by the manager in its discretion due to market conditions or opportunities. The foregoing reflects the thoughts and opinions of Brandes Investment Partners® exclusively and is subject to change without notice.

The Fund Documents may be obtained without cost by contacting the Administrator for the Fund, your Financial Representative, or at the offices of the paying agent or representative in each jurisdiction. Austria, Belgium, France, Germany, Luxembourg, Netherlands, and the United Kingdom: FE fundinfo (Luxembourg) S.à.r.l., 6 Boulevard des Lumières, Belvaux, 4369 Luxembourg.
